

MAIN REQUIREMENTS FOR SPRINT 6

1. Streamlined Individual Onboarding (Minimizar Fricción)

- To improve user conversion, we are shortening the onboarding process. The **only mandatory fields** for account creation will be: Full Name, Profile Photo, Email, Current Employer, Total Flight Hours, and a brief Profile Description.
 - *For Flight Crew profiles only:* At least one valid license (including document photo and expiration date) is also mandatory.
 - *Progressive Profile:* After creation, the system should guide the user to complete the rest of their profile using a completion percentage indicator.

2. License Expiration Logic (Vigencia Lógica de Licencias)

- The system should show a **visible warning/alert** if a license expiration date has already passed, but it **should NOT completely block** the user from registering.
 - *FAA Exception:* FAA licenses do not expire; their validity depends on the associated Medical Certificate (Class 1, 2, or 3). Therefore, the expiration field for FAA should reference the medical exam date. We should also include a "Permanent" option for licenses that do not periodically expire to prevent false alerts.

3. Optional Aircraft Ratings (Habilitaciones Opcionales)

- Aircraft **Type Ratings will now be completely optional** during onboarding. Forcing this requirement creates friction for students, pilots in transition, or simulator instructors who might not hold a specific type rating yet. The system will invite them to complete it later.

4. Text Field Lengths & Sanitization (Restricciones y Sanitización)

- *First/Last Name:* Mandatory, alphabetic characters, accents, and spaces only (No numbers or special characters).
- *Middle Name:* International flexibility allowed, no special character restrictions, just a reasonable length limit.
- *Personal Description:* Free text up to a suggested maximum of 2,000 characters.
- *License Number:* Must remain an open alphanumeric field to support global formats (FAA, EASA, DGAC, etc.). However, we must restrict/sanitize emojis and special symbols to prevent database corruption (only alphanumeric, hyphens, and periods allowed).

5. Real-Time Push Notifications (Próxima Prioridad)

- Stakeholders highlighted **Push Notifications** as a fundamental feature for user retention and engagement. They expect real-time phone alerts for: new messages/contact requests, profile visits, and when another user "likes" their profile. Users must also be able to see a history of who visited or liked their profile.

6. Admin Dashboard Main Accounts (Accesos Administrativos)

- Below are the main stakeholder emails that need to be granted administrative dashboard access once their accounts are ready:
 - jabedmirabent@icloud.com
 - ghegewisch@progressivejet.com
 - marioabed@gmail.com
 - romirabent@gmail.com
